Shape analysis of brains

Informatics framework

Automated brain labeling

Shape analysis of brains

Informatics framework

Automated brain labeling

Shape analysis

data: brain image

Shape analysis

goal: label anatomy

Shape analysis

gyrus labels...

Shape analysis

...are based on sulcus definitions

Shape analysis

so identify the sulcus folds:

Shape analysis

depth map

Shape analysis

basins containing fundi that run through pits

**How should we extend fundi to basin edges?
How should we smooth them?**

Shape analysis

spectral quantification: Laplace-Beltrami operator

2nd spectra

6th spectra

8th spectra

Global to local

LBO on sulcal basin

LBO on sulcal basins of left hemisphere

Shape analysis

geometric shape quantification of nested structures

basins

volume
surface area
cortical thickness / sulcal span
...

curves

length / tortuosity
depth
curvature
convexity
spectral components
...

points

convex hull volume
sequence along a curve
...

What other shape measures should we use?

Shape analysis of brains

Informatics framework

Automated brain labeling

Shape analysis of brains

Informatics framework

Automated brain labeling

Informatics framework

nested structures within a graph-based data model

What other node/edge properties should we include?

Informatics framework

graph-based database of hierarchical brain features

This graph model shows an example of how relations between basins and their labeled regions are represented for two (CUMC12) subjects. Note that basin 88 and 89 share similar labels.

Informatics framework

graph-based database: example query

What use cases should we expect?

Informatics framework

graph-based database: infrastructure and example query

The graph model can be queried via REST, Cypher, reXster, or Gremlin.
This example shows how to query all outgoing relations from basin 88:

What surface format should we require as input? Gifti?

What gui should we consider aside from Paraview web?

Informatics framework

graph-based database: hierarchical structures view

whole
brain

single
folds

What other visualizations should we consider?

Shape analysis of brains

Informatics framework

Automated brain labeling

Shape analysis of brains

Informatics framework

Automated brain labeling

Automated brain labeling atlas + unlabeled target brain

atlas

target

Automated brain labeling

step 1: extract structures, compute their features

Automated brain labeling

step 2: match atlas and target features

Is there a better way to compare curves than dynamic time warping?

What is the best way to compare two trees (branching fundi)?

Automated brain labeling

step 3: compute transforms from atlas to target

Automated brain labeling

step 3: apply transforms to atlas

What is the best way to drive these features into register?

Automated brain labeling

OR extract, match, and fill labels without registration!

Automated brain labeling

extract basins + fundi

Automated brain labeling fundi

Automated brain labeling

fundi + manual labels

Automated brain labeling

fundi + manual labels

Automated brain labeling

label propagation (graph transduction)

What other label propagation algorithms should we consider?

Automated brain labeling

consider features from other modalities

Automated brain labeling

fMRI networks as features

What other fMRI features should we extract?

Automated brain labeling diffusion tractography clusters as features

Automated brain labeling

diffusion tractography clusters as features

Automated brain labeling

diffusion tractography clusters as features

What other diffusion features should we extract?

Automated brain labeling multimodal data

Multi-Modal MRI Reproducibility Resource Images

OASIS

<http://www.oasis-brains.org/> T1

MRI Multimodal Reproducibility Resource

<http://www.nitrc.org/projects/multimodal/>
MPRAGE T1, FLAIR, resting state fMRI, B0 and B1 field maps, ASL, VASO, DTI, quantitative T1 and T2 mapping, magnetization transfer imaging
MMRR2 includes a 7T T1-weighted scan

PLoS 12

<http://www.plosone.org/article/info:doi%2F10.1371%2Fjournal.pone.0006660>
MPRAGE T1, fMRI, resting state fMRI

Nathan Kline Institute / Rockland Sample

http://fcon_1000.projects.nitrc.org/indi/pro/nki.html
MPRAGE T1, T2, resting state fMRI, DSI,...

EMBARC

<http://grants.nih.gov/grants/guide/rfa-files/RFA-MH-10-040.html>
T1, fMRI and resting state fMRI, DTI, ASL, EEG

What other modalities should we extract features from?

aMRI features

Forrest Bao
Graduate student, Texas Tech

fMRI features

Gael Varoquaux
NeuroSpin, France

dMRI features

Eleftherios Garyfallidis
Cambridge University

Feature matching

Yrjö Häme
Graduate student

Database & visualization

Noah Lee
Postdoctoral research scientist

Registration

Brian Avants
Asst. Professor, UPenn
